8 IN THE UNITED STATES DISTRICT COURT
9 FOR THE NORTHERN DISTRICT OF CALIFORNIA
10

11 LEVI JONES, et al.,

No. C 12-01633 CRB

12 Plaintiffs,

**ORDER DENYING MOTIONS FOR
CLASS CERTIFICATION**

13 v.

14 CONAGRA FOODS, INC.,

15 Defendant.
16 _____/

17 This is a putative consumer class action about allegedly deceptive and misleading
18 labels on three types of food products. This district has seen a flood of such cases,¹ in which
19 plaintiffs have challenged, with varying degrees of success, marketing claims on everything
20 from iced tea to nutrition bars. This Order does not—and, given their multifariousness, could
21 not—speak to the merits of all such cases. It addresses only whether Plaintiffs have met their
22 burden in this case. In this case, Plaintiffs have moved to certify three separate classes under
23 Federal Rule of Civil Procedure 23(b)(2) and 23(b)(3)—one for each type of food product at
24 issue. Because the Court finds that Plaintiffs have failed to meet several of the requirements
25 of Rule 23, it DENIES all three pending motions.

26 //

27 //

28 _____
¹ See Nicole E. Negowetti, “Defining Natural Foods: The Search for a Natural Law,” 26 Regent U.L. Rev. 329, 333 (2014) (recognizing that the Northern District of California is known as the “Food Court.”).

I. BACKGROUND

On April 2, 2012, Plaintiffs Levi Jones, Christine Sturges, and Edd Ozard,² on behalf of themselves and others similarly situated, filed a class action suit alleging that Defendant ConAgra's website and products—including Hunt's tomato products, PAM cooking spray products, and Swiss Miss hot cocoa products—contain deceptive and misleading information. See generally Compl. (dkt. 1). They filed a First Amended Complaint on July 2, 2012. See generally FAC (dkt. 27). On December 17, 2012, this Court granted in part Defendant's Motion to Dismiss the FAC. Order Granting In Part MTD (dkt. 91).

On January 15, 2013, Plaintiffs filed a Second Amended Complaint, alleging (1) unlawful, unfair, and fraudulent business acts and practices in violation of California Business and Professions Code section 17200 ("UCL"), (2) misleading, deceptive, and untrue advertising in violation of California Business and Professions Code section 17500 ("FAL"), (3) violations of the Consumers Legal Remedies Act ("CLRA"), and (4) restitution based on unjust enrichment. See SAC (dkt. 95) ¶¶ 255-321. Plaintiffs sought to certify a PAM cooking spray class in December of 2013, but the Court directed Plaintiffs to move for class certification of all three product lines at the same time. See Minutes (dkt. 183). Plaintiffs have now done so. See generally PAM Mot. (dkt. 128); Hunt's Mot. (dkt. 189); SM Mot. (dkt. 190). This Order addresses all three motions, breaking out discussion by product group.

A. Hunt's

As to Hunt's, Plaintiffs seek to certify a class under Rule 23(b)(2) and Rule 23(b)(3) of "All persons in the state of California who, from April 2, 2008, until the date of notice, purchased a Hunt's® canned tomato product bearing the label statement '100% Natural' or 'Free of artificial ingredients & preservatives' but which contained the following ingredients: citric acid and/or calcium chloride." Hunt's Mot. at i. There are seven segments of Hunt's tomato products: diced tomatoes, crushed tomatoes, stewed tomatoes, whole tomatoes,

² Ozard has since voluntarily dismissed his claims. See Order Denying Motion for Fees (dkt. 182) at 1.

1 tomato sauce, tomato puree, and tomato paste. SAC ¶ 8; Nagle Decl. (dkt. 203) Ex. A at 21.
 2 There are also numerous varieties and sizes (as well as multi-packs) of each segment.
 3 See Opp’n to Hunt’s Mot. (dkt. 202) at 3 (asserting as an example that there were 16 flavor
 4 varieties of diced tomatoes). Plaintiff Levi Jones purchased diced tomatoes and tomato
 5 sauce. Shelton Decl. (dkt. 189-8) Ex. B (Jones Depo) at 48-50, 56-57. The products that
 6 Jones purchased were labeled “100% Natural” and “Free of artificial ingredients &
 7 preservatives.” Hunt’s Mot. at 2. Hunt’s diced tomatoes contain citric acid and calcium
 8 chloride, and Hunt’s tomato sauce includes citric acid, but not calcium chloride. Id.

9 According to Plaintiffs, all Hunt’s tomato products included the “100% Natural” and
 10 “Free of artificial ingredients & preservatives” labels, although some segments contained
 11 only citric acid (crushed tomatoes, tomato sauce, tomato paste, and tomato puree), while
 12 some contained both citric acid and calcium chloride (diced tomatoes, whole tomatoes, and
 13 stewed tomatoes). Id. at 2-3. According to Defendant, the product labels changed during the
 14 proposed class period, and “for some product varieties, no references to preservatives were
 15 ever made on the label.” Opp’n to Hunt’s Mot. at 4; Nagle Decl. ¶¶ 6 (handful of Hunt’s
 16 tomato products do not state “100% Natural”), 10-11 (“for some product varieties, no
 17 references to preservatives were ever made on the label”), 14 (Defendant removed the
 18 “artificial/preservatives” label from most Hunt’s products during the class period, and at
 19 various times between 2011 and 2013).

20 **B. PAM**

21 As to PAM, Plaintiffs seek to certify a class under Rule 23(b)(2) and Rule 23(b)(3) of
 22 “All persons in the State of California who, from four years prior to the filing of the original
 23 complaint until the date of notice, purchased PAM cooking spray labeled ‘100%
 24 NATURAL.’” PAM Mot. at i. Plaintiffs assert that the PAM products are not natural
 25 because “they contain significant quantities of undisclosed petrochemicals such as Petroleum
 26 gas (liquefied), Propane, Propane 2-methyl (isobutane) and Butane.” Id. at 1.³ Plaintiff
 27

28 ³ According to Defendant, the two organic PAM varieties use carbon dioxide as a propellant.
See Opp’n to PAM Mot. (dkt. 149) at 4.

Christine Sturges purchased PAM Original Cooking Spray in a 12 ounce can, and PAM Certified Organic Olive Oil Spray in a 5 ounce can. Id.⁴

According to Plaintiffs, “[t]here are two varieties of PAM cooking spray products at issue.” Id. at 3. According to Defendant, there are seven varieties of PAM for retail sale: Original, Butter, Baking, Grilling, Olive Oil, Organic Olive Oil, and Organic Canola Oil. Opp’n to PAM Mot. at 2; Richardson Decl. (dkt. 160) ¶ 6. The Butter, Baking and Grilling varieties never had a “100% Natural” label. Opp’n to PAM Mot. at 3; Richardson Decl. ¶ 8. The PAM Original and Olive Oil varieties included a “100% Natural” label at the beginning of the class period, and then in 2010, Defendant replaced the “100% Natural” claim with a claim that the products were “made with 100% natural canola [or olive] oil.” Opp’n to PAM Mot. at 2-3; Richardson Decl. ¶ 13.⁵ The timing of that label change varied between the two products and among the different sizes. Opp’n to PAM Mot. at 3; Richardson Decl. ¶ 19. The Organic Olive Oil and Organic Canola Oil products have not gone through relevant label changes. Id.

C. Swiss Miss

As to Swiss Miss, Plaintiffs seek to certify a class under Rule 23(b)(2) and Rule 23(b)(3) of “All persons in the State of California who, from April 2, 2008, until the date of notice, purchased a Swiss Miss® hot cocoa product bearing the label statement ‘Natural Source of Antioxidants’ or ‘Natural Antioxidants Are Found in Cocoa.’” SM Mot. at i. Plaintiffs assert that Defendant is “forbidden from making unauthorized antioxidant claims on products that fail to meet the minimum nutritional requirements required for the antioxidant claim being made.” Id. at 1, 2.⁶ During the class period, Plaintiff Christine

⁴ Plaintiffs do not challenge the “organic” designation.

⁵ Plaintiffs do not challenge the newer “made with” label.

⁶ This assertion is based on the Sherman Law’s having incorporated the FDA’s regulations into California law, and specifically on 21 C.F.R. § 101.54. Id. at 2.

Section 101.54(b) provides that “The terms ‘high,’ ‘rich in,’ or ‘excellent source of’ may be used on the label and in the labeling of foods . . . provided that the food contains 20 percent of more of the RDI [Reference Daily Intake] or the DRV [Daily Reference Value] per reference amount customarily

Sturges purchased Swiss Miss cocoa products, including Classics Milk Chocolate cocoa in a 7.3 ounce box. Id. at 1. The products purchased by Plaintiff were labeled with the statements “Natural Source of Antioxidants” and “Natural Antioxidants Are Found in Cocoa.” Id.

According to Plaintiffs, “Purchasers of ConAgra’s Swiss Miss® hot cocoa mix bought products with the identical labeling claims.” Id. at 1-2. According to Defendant, it has offered over a dozen varieties of Swiss Miss for sale during the class period, in multiple sizes, boxes and canisters. Kensicki Decl. (dkt. 198) ¶ 6. During the class period, labels on some Swiss Miss varieties included one of the two challenged statements about antioxidants, while others made no antioxidant references. Id. ¶ 12. The antioxidant statements were either on the top box panel or on the back of the canister. Id. ¶ 10. The following chart is a partial reproduction of one from the Swiss Miss brand manager’s declaration:

Swiss Miss Variety	No antioxidant reference	Natural Source of Antioxidants	Natural Antioxidants Are Found in Cocoa
Rich Chocolate (10 pk)	until 7/29/10		since 7/29/10
Rich Chocolate (54 oz.)	until 6/28/10		since 6/28/10
Milk Chocolate (6 pk)	until 11/1/07	11/1/07-7/29/10	since 7/29/10

consumed.” Such terms are permitted provided that “(i) The product contains a food that meets the definition of ‘high’ in paragraph (b)(1). . . .; and (ii) The label or labeling clearly identifies the food that is the subject of the claim. . . .”

Section 101.54(c) provides that “(1) The terms ‘good source,’ ‘contains,’ or ‘provides’ may be used on the label and in the labeling of foods . . . provided that the food contains 10 to 19 percent of the RDI or the DRV per reference amount customarily consumed.” Such terms are permitted provided that “(2)(i) The product contains a food that meets the definition of ‘good source’ in paragraph (c)(1). . . .; and (ii) The label or labeling clearly identifies the food that is the subject of the claim. . . .”

Section 101.54(g) governs antioxidant claims, and provides that “A nutrient content claim that characterizes the level of antioxidant nutrients present in a food may be used on the label or in the labeling of that food when: (1) An RDI has been established for each of the nutrients; (2) The nutrients that are the subject of the claim have recognized antioxidant activity. . . .; (3) The level of each nutrient that is the subject of the claim is sufficient to qualify for the § 101.54(b), (c), or (e) claim. . . .; and (4) The names of the nutrients that are the subject of the claim are included as part of the claim. . . .”

1	Milk Chocolate (10 pk)	until 10/19/07	10/19/07-7/29/10	since 7/29/10
2	Milk Chocolate (10+2 pk)	since introduction 8/2/11		
3	Milk Chocolate (30 pk)	until 6/18/10		since 6/18/10
4	Milk Chocolate (50 pk)	throughout class period		
5	Milk Chocolate (19 oz./26 oz.)	until 11/5/07 & since 6/23/10	11/5/07-6/23/10	
6	Marshmallow (6 pk)	until 10/23/07	10/23/07-7/29/10	since 7/29/10
7	Marshmallow (10+2 pk)	since introduction 8/2/11		
8	Marshmallow (30 pk)	until 6/18/10		since 6/18/10
9	No Sugar Added (13.8 oz.)	until 12/5/07 & since 6/25/10	12/5/07-6/25/10	
10	No Sugar Added (60 pk)	throughout class period		
11	Dark Chocolate Sensation (8 pk)	until 9/12/07	9/12/07-5/5/10	since 5/5/10
12	French Vanilla (6 pk/8 pk)	until 10/30/07 & since 6/18/12	10/30/07-7/29/10	7/29/10-6/18/12

17
18 See id. ¶ 12 (additional rows omitted).

19 II. LEGAL STANDARD

20 Class certification under Rule 23 is a two-step process. First, Plaintiffs must meet the
21 four requirements of 23(a): “numerosity,” “commonality,” “typicality,” and “adequacy.”
22 Fed. R. Civ. P. 23. “One or more members of a class may sue or be sued as representative
23 parties on behalf of all members only if (1) the class is so numerous that joinder of all
24 members is impracticable; (2) there are questions of law or fact common to the class; (3) the
25 claims or defenses of the representative parties are typical of the claims or defenses of the
26 class; and (4) the representative parties will fairly and adequately protect the interests of the
27 class.” Fed. R. Civ. P. 23(a). “Class certification is proper only if the trial court has
28 concluded, after a ‘rigorous analysis,’ that Rule 23(a) has been satisfied.” Wang v. Chinese

1 Daily News, Inc., 709 F.3d 829, 833 (9th Cir. 2013) (quoting Wal-Mart Stores, Inc. v. Dukes,
2 131 S.Ct. 2541, 2551 (2011)).

3 Second, Plaintiffs must also establish that one of the bases for certification in Rule
4 23(b) is met. Rule 23(b)(2) applies when “the party opposing the class has acted or refused
5 to act on grounds that apply generally to the class, so that final injunctive relief or
6 corresponding declaratory relief is appropriate respecting the class as a whole.” Rule
7 23(b)(3) provides that a class may be maintained where “questions of law or fact common to
8 class members predominate over any questions affecting only individual members,” and a
9 class action would be “superior to other available methods for fairly and efficiently
10 adjudicating the controversy.” Id.; see also Local Joint Exec. Bd. of Culinary/Bartender
11 Trust Fund v. Las Vegas Sands, Inc., 244 F.3d 1152, 1163 (9th Cir. 2001) (holding Rule
12 23(b)(3) satisfied where “[i]ndividualized issues [were] few, and most of them [were] likely
13 to be relatively easy”).

14 The party seeking class certification bears the burden of demonstrating by a
15 preponderance of the evidence that all four requirements of Rules 23(a) and at least one of
16 the three requirements under Rule 23(b) are met. See Dukes, 131 S.Ct. at 2551 (“A party
17 seeking class certification must affirmatively demonstrate his compliance with the
18 Rule—that is, he must be prepared to prove that there are in fact sufficiently numerous
19 parties, common questions of law or fact, etc.”).

20 **III. DISCUSSION**

21 **A. Plaintiffs’ Standing**

22 “[N]amed plaintiffs who represent a class must allege and show that they personally
23 have been injured, not that injury has been suffered by other, unidentified members of the
24 class to which they belong and which they purport to represent.” Lewis v. Casey, 518 U.S.
25 343, 357 (1996) (internal quotation marks omitted).

26 **1. Hunt’s**

27 As to Hunt’s, Defendant asserts that Jones lacks standing to bring suit because he did
28 not rely on the allegedly misleading labels, because compliance with the law was not a factor

1 in his purchasing decisions, because he was not injured, and because he only purchased two
 2 of the many products at issue. Opp'n to Hunt's Mot. at 8-11. Aside from the argument about
 3 the unpurchased products, which really pertains to typicality, see also Hanlon v. Chrysler
 4 Corp., 150 F.3d 1011, 1020 (9th Cir. 1998) (representative claims need only be "reasonably
 5 co-extensive with those of absent class members; they need not be substantially identical."),
 6 these arguments are initially persuasive, based on Jones's deposition testimony. Jones
 7 testified that there was nothing particular on the label that was a factor in his decision to
 8 purchase Hunt's diced tomatoes but that he bought them because his parents did and he was a
 9 "loyal customer." Hawk Decl. II (dkt. 205) Ex. D (Jones Depo) at 53-54. He testified
 10 initially that he was "absolutely" influenced in part by the "100% natural" label to purchase
 11 Hunt's products, id. at 58, then immediately conceded that he did not know whether the
 12 "100% natural" statement on the label was a factor in his purchases, id. at 59. He testified
 13 that he had no specific recollection of seeing the "free of artificial ingredients and
 14 preservatives" label. Id. at 81. He testified that citric acid is not a food he tries to avoid, id.
 15 at 77, that calcium chloride is not an ingredient he has ever tried to avoid, id. at 79, and that
 16 "if those tomatoes had calcium chloride and citric acid in them when [he] purchased them,
 17 and [he'd] known that, [he] still would have purchased them," id. at 80. Indeed, after this
 18 suit was filed, he purchased multiple other brands of tomato products that also contained
 19 citric acid and/or calcium chloride. Id. at 114, 117-18, 121-22.

20 Nonetheless, Plaintiffs' counsel rehabilitated Jones later in the same deposition.
 21 Under questioning from his counsel,⁷ Jones testified that he did read the "100% natural" label
 22 at the time he made his purchase and that he relied on it. Id. at 134-35. He went on to say
 23 that he makes an effort to seek out natural foods in his diet, id. at 136, and that had he known
 24 that Hunt's products had citric acid and calcium chloride, he would not have purchased them,
 25 id. He testified that he did not know that citric acid and calcium chloride were unnatural
 26 products, and that when he found out that Hunt's products contained those ingredients, he

27
 28 ⁷ Defense counsel rightly objected to some of these questions as leading. See id. at 134-36.
 Nonetheless, "Did you in any way rely on that label?" is permissible. See id. at 135.

1 stopped buying them. Id. at 137-38.⁸ Given this testimony, Jones has made a sufficient
2 showing that he relied on the labels in purchasing a product that he would not have otherwise
3 purchased. This Order addresses the question of damages in its discussion of Rule 23(b)(3)
4 predominance.

5 2. PAM

6 As to PAM, Defendant does not challenge Plaintiff Sturges's standing.

7 3. Swiss Miss

8 As to Swiss Miss, Defendant challenges Plaintiff Sturges's standing, arguing that she
9 was not deceived by the challenged statements and that she was not injured. See Opp'n to
10 SM Mot. (dkt. 197) at 10-12. Sturges's testimony indeed presents a problem for Plaintiffs.

11 Although Sturges's testimony undermined the notion that she was injured, at least it
12 did not entirely disclaim injury, see Hawk Decl. I (dkt. 151) Ex. A (Sturges Depo) at 150-51
13 (answering that she did not know whether she suffered "any kind of injury, financial or
14 otherwise," or whether the Swiss Miss products were "worth what [she] paid for them.")—and
15 this Order will discuss whether it is possible to quantify her injury in its discussion of Rule
16 23(b)(3) predominance.

17 More problematic, despite testifying adequately that she relied on an antioxidant
18 statement,⁹ see Hawk Decl. II Ex. A (Sturges Depo) at 86 (Q: "So, in . . . deciding to buy
19 Swiss Miss, what factors influenced you in your purchases since April 2008?" A: "I liked
20 that it said antioxidants, I liked that it had calcium, and then I know the brand."), Sturges also
21 testified that the statement was not misleading:

22 Q: Is the statement natural antioxidants are found in cocoa, to your understanding now
23 as you sit here, is that a true statement?

24 A: Yes.

25 Q: Is there anything that you know of that is misleading about that statement?

26 . . . A: I don't – I don't know if it's misleading. Now, I don't think so.

27 ⁸ Plaintiff's counsel did not walk back Jones's testimony that he never considered whether the
28 labeling of a product complied with state or federal labeling laws. See id. at 63. The "illegal products"
basis for standing is therefore unavailable here, and Jones could represent no such class.

⁹ Sturges testified that the only antioxidant statement that she relied on was "Natural
Antioxidants Are Found In Cocoa." Id. at 98.

1 Q: You don't think so what?

2 A: I would say it's not misleading now, but I don't know, 'cuz it just says—

3 Q: Well, was it misleading to you when you read it before you bought Swiss Miss?

4 A: No, I'm just saying it's one of the things that I was attracted to when I bought it.

5 Q: All right. But I – I was really trying to focus on whether it was misleading or not. . . your testimony is that it's not misleading today, correct?

6 A: Correct.

7 Id. at 98-99. She went on to testify that “it made me think I was buying something with
8 antioxidants in it, as opposed to just saying they're in cocoa.” Id. at 101.¹⁰ She later stated
9 that she did not know whether she felt that it was misleading when she bought the product.
10 Id. at 101-102. And she responded “No” to the question of whether “a belief that [her]
11 family would enjoy some particular health benefit from drinking Swiss Miss” was a factor in
12 her purchase. Id. at 88.¹¹ This testimony falls short of the requirement in Hinojos v. Kohl's
13 Corp., 718 F.3d 1098, 1109 (9th Cir. 2013), that to establish standing to bring a UCL or FAL
14 claim, a consumer must allege, among other things, that “the defendant made a false
15 representation about a product.” Of course the SAC alleges that the challenged antioxidant
16 statements are misleading, see SAC ¶ 3(H), but Sturges's testimony contradicts that
17 allegation.

18 Based on her testimony, Sturges lacks standing.

19 **B. Rule 23(a) factors**

20 **1. Numerosity**

21 The requirement of numerosity is that the class be so numerous that joinder of all
22 members individually would be impracticable. See Fed. R. Civ. P. 23(a)(1); Staton v.
23 Boeing, 327 F.3d 938, 953 (9th Cir. 2003). “Although there is no exact number, some courts
24 have held that numerosity may be presumed when the class comprises forty or more

25 ¹⁰ Importantly, Plaintiffs point to no evidence that this is false. Their argument is not that Swiss
26 Miss products do not contain antioxidants but instead that Defendant did not comply with 21 C.F.R. §
27 101.54. See Reply to SM Mot. (dkt. 211) at 5 (“ConAgra's antioxidant claims . . . are unlawful and
28 render the product mislabeled because the label claim does not include the specific name of the nutrient
that is an antioxidant; there is no established RDI for that unnamed antioxidant; and the antioxidant
nutrient does not meet the requirements for nutrient content claims in 21 C.F.R. § 101.54(b).”); see
also Hawk Decl. II Ex. F (Andon Decl.) ¶ 2 (concluding that Swiss Miss antioxidant statement is
factually accurate).

¹¹ Sturges also testified that whether or not the product's labeling complied with federal or state
law was not a factor in her decision to purchase it. Id.

members.” See Krzesniak v. Cendant Corp., No. 05-05156, 2007 WL 1795703, at *7 (N. D. Cal. June 20, 2007).

a. Hunt’s

As to Hunt’s, Plaintiffs represent that “this element is easily satisfied, as Defendant has sold hundreds of thousands (if not millions) of Hunt’s canned tomato products during the class period in California.” Hunt’s Mot. at 7. Defendant does not dispute numerosity.

b. PAM

As to PAM, Plaintiffs represent that “[b]ased on sales data, it is estimated that hundreds of thousands of consumers have purchased PAM cooking spray labeled ‘100% Natural’ in California during the class period.” PAM Mot. at 6. Defendant does not dispute numerosity.

c. Swiss Miss

As to Swiss Miss, Plaintiffs represent that “Defendant has sold hundreds of thousands (if not millions) of Swiss Miss hot cocoa products during the class period in California.” SM Mot. at 5. Defendant does not dispute numerosity.

2. Commonality

The requirement of commonality demands that there be “questions of law or fact common to the class.” Fed. R. Civ. P. 23(a)(2). The requirements for showing commonality are “minimal.” See Hanlon, 150 F.3d at 1020. The showing required for Rule 23(a)(2) is “less rigorous” than the related requirements of Rule 23(b)(3). See id. at 1019. “The existence of shared legal issues with divergent factual predicates is sufficient, as is a common core of salient facts coupled with disparate legal remedies within the class.” Id. Commonality is satisfied where claims “depend upon a common contention . . . of such a nature that it is capable of classwide resolution—which means that determination of its truth or falsity will resolve an issue that is central to the validity of each one of the claims in one stroke.” Dukes, 131 S. Ct. at 2551.

//

//

a. Hunt's

As to Hunt's, Plaintiffs assert that there are numerous common questions of law and fact, such as whether the "100% natural" and "free of artificial ingredients & preservatives" labels are unlawful, unfair, deceptive, or misleading when affixed to products containing citric acid and/or calcium chloride. Hunt's Mot. at 8; see also Chavez v. Blue Sky Natural Bev. Co., 268 F.R.D. 365, 377 (N.D. Cal. 2010) (concluding that class member claims had common issue of "whether the Blue Sky packaging and marketing materials are unlawful, unfair, deceptive or misleading to a reasonable consumer."). Defendant does not dispute commonality.

b. PAM

As to PAM, Plaintiffs assert that there is a common core of facts—purchase of Defendant's cooking spray products with the same misleading label—and a common question: "can Defendant use the term '100% Natural' when the product includes unnatural ingredients?" PAM Mot. at 6. Defendant does not dispute commonality.

c. Swiss Miss

As to Swiss Miss, Plaintiffs assert that there is a common core of facts, in that all class members purchased one of Defendant's hot cocoa products with the same misleading antioxidant language. SM Mot. at 6. There are also common questions, such as "whether the antioxidant label representations are unlawful, unfair, deceptive, or misleading to reasonable consumers." Id. Defendant does not dispute commonality.

3. Typicality

The requirement of typicality is met if "the claims or defenses of the representative parties are typical of the claims or defenses of the class." Fed. R. Civ. P. 23(a)(3). Representative claims need only be "reasonably co-extensive with those of absent class members; they need not be substantially identical." See Hanlon, 150 F.3d at 1020.

a. Hunt's

As to Hunt's, Defendant argues that Jones is not typical because he lacks standing. Opp'n to Hunt's Mot. at 15. Because the Court concludes above that Jones has adequately

1 established standing, it also finds that he is typical. Jones’s claims are based on Defendant’s
2 products being misbranded in exactly the same way as set out in the proposed class
3 definition. See Chavez, 268 F.R.D. at 377 (finding plaintiff typical where his claims arose
4 “out of the allegedly false statement, worded in several variations, made on every Blue Sky
5 container indicating that the beverages are connected to Santa Fe, New Mexico”).

6 **b. PAM**

7 As to PAM, Defendant argues that Sturges is not typical because she cannot assert
8 ingredient list claims, because she cannot pursue claims premised on purchases of illegal
9 products, and because she did not buy all of the varieties of PAM. Opp’n to PAM Mot. at
10 11-12.¹² Defendant’s first two arguments are persuasive.

11 It is not clear from Plaintiffs’ moving papers whether they intended to certify a class
12 based on Defendant’s having listed “propellant” on the ingredient list instead of identifying
13 each of the component parts of the propellant. See, e.g., PAM Mot. at 7 (“Defendant
14 misbranded an ingredient as ‘propellant’ instead of using the common or usual name”).
15 Assuming that they did move to certify such a class, Sturges conceded in her deposition that
16 she did not read the ingredient list and was not curious about the composition of the
17 propellant. See Hawk Decl. II Ex. A (Sturges Depo) at 92. In their reply, Plaintiffs state that
18 “Plaintiff’s claim is not that she relied on the ingredient list to her detriment. Her claim is
19 that she relied on the label statement ‘100% Natural,’ when in fact the products were not
20 100% natural.” Reply to PAM Mot. (dkt. 172) at 5. Accordingly, Plaintiffs agree that
21 Sturges cannot represent a “propellant” ingredient class.

22
23
24
25
26 ¹² Defendant also argues that Sturges is atypical because she cannot recover for any alleged
27 injury—noting that she cannot recall what she paid for the products and does not know whether she paid
28 more than they were worth. Id. at 12 (citing Hawk Decl. I Ex. A (Sturges Depo) at 73, 150, 152, 193).
This is not really a typicality argument—indeed, Defendant would probably argue that Sturges is typical
in that none of the class members know what they paid—but an argument about ascertainability and
Plaintiffs’ damages plan.

Nor can Sturges represent a class based on claims about purchases of illegal products.¹³ Sturges testified that it was never “a factor in [her] decision to buy PAM, whether or not the labeling on the can complied with state or Federal law.” Hawk Decl. II Ex. A at 91. Plaintiffs argue that “[t]his testimony does not lead to the conclusion that Plaintiff did not care whether the products were legal or not,” Reply at 5, but that seems precisely what it means.

Sturges can, however, represent a class of people who purchased different PAM varieties than the two she purchased, provided that the varieties at issue all contained the same allegedly misleading label and are alleged to be misleading for the same reason. Her claims are reasonably co-extensive with those of absent class members, even if they bought Organic Canola Oil PAM and she bought Organic Olive Oil PAM. See Chavez, 268 F.R.D. at 377 (finding plaintiff typical where his claims arose “out of the allegedly false statement, worded in several variations, made on every Blue Sky container indicating that the beverages are connected to Santa Fe, New Mexico”).

c. Swiss Miss

As to Swiss Miss, Defendant argues that Sturges is not typical because (1) she was not deceived by the challenged statements and (2) she cannot claim that she “would not have purchased Defendant’s Misbranded Food Products had [she] known they were not capable of being legally sold or held,” SAC ¶¶ 238, 242, having disclaimed that position, Opp’n to SM Mot. Defendant is correct on both counts. Sturges indeed testified that compliance with labeling law was not a factor in her purchase. See Hawk Decl. I Ex. A (Sturges Depo) at 88. And, given Sturges’s testimony that the statement she relied on was not misleading, she is not typical of a class of consumers who were allegedly misled. See Stearns v. Ticketmaster Corp., 655 F.3d 1013, 1019-20 (9th Cir. 2011) (upholding district court’s holding that proposed class representative who did not see challenged statement, and other who was not

¹³ The SAC alleges that Sturges “would not have purchased Defendant’s Misbranded Food Products had [she] known they were not capable of being legally sold or held.” SAC ¶¶ 238, 242.

deceived by challenged statement, were not typical). The Court finds that Sturges is not typical.

4. Adequacy

The requirement of adequate representation asks whether the representative “will fairly and adequately protect the interests of the class.” See Fed. R. Civ. P. 23(a)(4). Courts are to inquire (1) whether the named plaintiffs and counsel have any conflicts of interest with the rest of the class and (2) whether the named plaintiff and counsel will prosecute the action vigorously for the class. See Hanlon, 150 F.3d at 1020.

a. Hunt’s

As to Hunt’s, Defendant argues that Jones is inadequate because he is not typical. Opp’n to Hunt’s Mot. at 15. Because the Court concludes above that he is typical, it rejects this argument. Defendant also contends that Jones is inadequate because he “has handed the car keys to his lawyers”—by not having reviewed the initial complaint or the SAC before they were filed and by having no independent understanding of whether calcium chloride or citric acid are synthetic. Id. (citing Hawk Decl. II Ex. D (Jones Depo) at 104, 107). “Individuals are not adequate representatives of a class when ‘it appears that they have abdicated any role in the case beyond that of furnishing their names as plaintiffs.’” See Keegan v. Am. Honda Motor Co., 284 F.R.D. 504, 525 (C.D. Cal. 2012). Jones did not abdicate; he made himself available for a lengthy deposition and he read the original complaint after it was filed. See Hawk Decl. II Ex. D (Jones Depo) at 105-106 (explaining the he had not read every paragraph but “what I have read, I have agreed with. But to say cover for cover and took notes on it, absolutely not.”). Though he is no expert on the ingredients at issue, it is sufficient for present purposes that he tries to live a healthy lifestyle, and that he “work[s] on the assumption that [a label] is true. . . . that a hundred percent natural means it is a much—it’s a better alternative than the cans sitting next to it.” Id. at 135-36. Jones is an adequate representative.

Defendant argues that Plaintiffs’ counsel is inadequate because it misrepresented key facts in the complaints, primarily allegations concerning Jones’s reliance. Opp’n to Hunt’s

1 Mot. at 15-16. Defendant's best example is that the SAC alleged that Plaintiff relied on a
 2 label about lycopene, but Jones stated in his deposition that he had never heard of lycopene
 3 before speaking with counsel, and that he did not see any statement about lycopene on a
 4 Hunt's label until after filing suit. See Hawk Decl. II Ex. D (Jones Depo) at 64-66.¹⁴
 5 Although Defendant casts the lycopene allegation as a violation of Rule 11, Opp'n to Hunts
 6 Mot. at 16, an overreaching complaint is hardly sufficient to find inadequacy. Every
 7 indication is that Plaintiffs' counsel would prosecute the case vigorously. Moreover, there is
 8 no evidence of a conflict. The Court therefore finds that Plaintiffs have demonstrated
 9 adequacy.

10 **b. PAM**

11 As to PAM, Defendant argues that neither Sturges nor her counsel are adequate,
 12 because of the typicality arguments discussed above, and because they disregard the Court's
 13 deadlines, made misrepresentations in the complaints, and retained a conflicted expert
 14 witness in another case. Opp'n to PAM Mot. at 12-15. None of these arguments are
 15 persuasive. The Court has already addressed Plaintiffs' having moved for class certification
 16 on just their PAM claims; although the Court did not grant severance, Plaintiffs' actions do
 17 not make them inadequate. In addition, as with Hunt's, the complaints overreached, but do
 18 not make counsel inadequate. Finally, this Court will not insert itself into Judge Koh's Kane
 19 v. Chobani case. Plaintiffs' counsel is adequate.

20 **c. Swiss Miss**

21 As to Swiss Miss, Defendant argues that "[f]or many of the same reasons she fails the
 22 typicality requirement, Sturges is not an adequate representative." Opp'n to SM Mot. at 12-
 23 13 (citing Kandel v. Brother Int'l Corp., 264 F.R.D. 630, 634 (C.D. Cal. 2010)). Defendant
 24 further argues that Sturges is inadequate because her counsel has misrepresented key facts in
 25 the complaints, such as the allegations that Sturges relied on statements on the website. Id. at
 26 13 (citing AC ¶¶ 231-32, SAC ¶¶ 235-36). Sturges's deposition revealed that she never
 27 visited the websites. Hawk Decl. I Ex. A (Sturges Depo) at 57, 79, 88. As with Hunt's and
 28

¹⁴ Plaintiffs are not seeking to certify a class involving the lycopene label.

PAM, the complaints overreached, but do not render counsel inadequate. Nonetheless, because of her testimony about not being misled, Sturges is not an adequate class representative.

5. Ascertainability

Although there is no explicit ascertainability requirement in Rule 23, courts in this district have routinely required plaintiffs to demonstrate ascertainability as part of Rule 23(a). See, e.g., Astiana v. Ben & Jerry's Homemade, Inc., No. 10-4387, 2014 WL 60097, at *1 (N.D. Cal. Jan. 7, 2014) (“apart from the explicit requirements of Rule 23, the party seeking class certification must also demonstrate that an identifiable and ascertainable class exists.”). A class is not ascertainable unless membership can be established by means of objective, verifiable criteria. Xavier v. Philip Morris USA, Inc., 787 F. Supp. 2d 1075, 1088-90 (N.D. Cal. 2011). “Without an objective, reliable way to ascertain class membership, the class quickly would become unmanageable, and the preclusive effect of final judgment would be easy to evade.” Id. at 1089. Nonetheless, “not all class members need to be ascertained prior to class certification.” Mauto v. Gen. Motors Corp., No. 07-892, 2008 WL 2775004, at *4 (E.D. Cal. July 15, 2008).

a. Hunt's

As to Hunt's, Defendant argues that the class is unascertainable because it is overbroad and because there is no objective and verifiable criteria for determining its members.

Defendant maintains that the proposed class includes individuals who either bought Hunt's products for reasons other than the labels, or who would not consider the labels misleading. Opp'n to Hunt's Mot. at 11. Judge Walker considered a similar argument in Chavez, and concluded that under the UCL and CLRA, a consumer class was ascertainable without needing to inquire into prospective class members' states of mind. 268 F.R.D. at 376 (explaining that under the UCL, relief “is available without individualized proof of deception, reliance and injury” and under the CLRA, “reliance on the alleged misrepresentations may be inferred as to the entire class if the named plaintiff can show that

material misrepresentations were made to the class members.”). Although the Hunt’s products’ labeling changed over time, Opp’n to Hunt’s Mot. at 14, the class definition only includes products “bearing the label statement ‘100% Natural’ or ‘Free of artificial ingredients & preservatives,’” Hunt’s Mot. at i, so individuals who purchased products without the challenged label statements are not at issue. See Notice of Supplemental Authority (dkt. 213) Ex. A (Order Denying Motion for Class Certification in Algarin v. Maybelline, No. 12-3000 (S.D. Cal. May 12, 2014) hereinafter “Algarin Order”) at 11 (“Consumer action classes that have been found to be overbroad generally include members who were never exposed to the alleged misrepresentations at all.”). The overbreadth question therefore comes down to whether the challenged label statements are material; that question is better addressed in the context of 23(b)(3) predominance.

Defendant next argues that there is no way to know who is really a member of the class. Opp’n to Hunt’s Mot. at 13-15. This is a subject upon which courts in this Circuit have diverged. See Sethavanish v. ZonePerfect Nutrition Co., No. 12-2907, 2014 WL 580696, at *5 (N.D. Cal. Feb. 13, 2014) (recognizing split).

Some courts have concluded that the ascertainability requirement cannot be met in the case of low-cost consumer purchases that customers would have no reliable way of remembering. See, e.g., id. at *6 (in which Judge Conti found it administratively unfeasible to determine who purchased ZonePerfect bars during the class period, or how many they purchased); In re POM Wonderful LLC, No. 10-2199, 2014 WL 1225184, at *6 (C.D. Cal. Mar. 25, 2014) (unascertainable because “[f]ew, if any, consumers are likely to have retained receipts during the class period” and “there is no way to reliably determine who purchased Defendant’s [juice] products or when they did so.”); Red v. Kraft Foods, Inc. No. 10-1028, 2012 WL 8019257, at *5 (C.D. Cal. Apr. 12, 2012) (finding unascertainable a proposed class of purchasers of various cracker and cookie products marketed as healthy despite including partially hydrogenated vegetable oil and other unhealthy ingredients); Hodes v. Van’s Int’l Foods, No. 09-1530, 2009 WL 2424214, at *4 (C.D. Cal. July 23, 2009) (court had concerns about “how Plaintiffs will identify each class member and prove which brand of Van’s frozen

1 waffles each member purchased, in what quantity, and for what purpose” given low
2 probability class members saved receipts).

3 Some courts have found such classes ascertainable, largely out of a concern that to
4 find otherwise would render a vast number of consumer class actions dead on arrival. See,
5 e.g., Ries v. Ariz. Beverages USA LLC, 287 F.R.D. 523, 535 (N.D. Cal. 2012) (in which
6 Judge Seeborg concluded that lack of receipts for iced tea purchases cannot be dispositive, or
7 “there would be no such thing as a consumer class action.”); Astiana v. Kashi Co., 291
8 F.R.D. 493, 500 (S.D. Cal. 2013) (relying on Ries in holding that “As long as the class
9 definition is sufficiently definite to identify putative class members, ‘[t]he challenges entailed
10 in the administration of this class are not so burdensome as to defeat certification.’”);
11 Thurston v. Bear Naked, Inc., No. 11-2890, 2013 WL 5664985, at *3 (S.D. Cal. July 30,
12 2013) (same judge also following Ries); McCrary v. The Elations Co., LLC, No. 13-242,
13 2014 WL 1779243, at *8 (C.D. Cal. Jan. 13, 2014) (“In this Circuit, it is enough that the class
14 definition describes a ‘set of common characteristics sufficient to allow’ a prospective
15 plaintiff ‘to identify himself or herself as having a right to recover based on the
16 description.’”).

17 Plaintiffs argue that the class here can be ascertained by reference to objective criteria,
18 and that “the objective criteria here is whether a consumer purchased one of the products at
19 issue during the class period.” Reply to Hunt’s Mot. (dkt. 210) at 5. Plaintiffs propose
20 having putative class members identify the Hunt’s brand products they purchased “by
21 photographic verification”¹⁵ and “through notice and by the requirement of sworn testimony
22 that each class member purchased a Hunt’s canned tomato product with the subject label
23 claims.” Id. at 4. This is problematic.

24 Even assuming that all proposed class members would be honest, it is hard to imagine
25 that they would be able to remember which particular Hunt’s products they purchased from
26 2008 to the present, and whether those products bore the challenged label statements. As

27
28 ¹⁵ Plaintiffs never state what that actually means. That the class members take pictures of cans
they own? Class members would not have saved all of their cans for the last six years. That the class
notice include pictures? That is not verification.

Defendant points out, there were “literally dozens of varieties with different can sizes, ingredients, and labeling over time” and “some Hunt’s cans included the challenged language, while others included no such language at all.” Opp’n to Hunt’s Mot. at 14, 15 n.10.¹⁶ Plaintiffs argued at the motion hearing that there is evidence that the named plaintiffs remember their specific purchases, and no evidence that any class members would have difficulty remembering theirs. But Defendant noted that Plaintiffs’ own materiality expert testified in this case that she had “no idea” whether the PAM she owned had a “100 percent natural” claim on it. Hawk Decl. I Ex. D (Caswell Depo) at 104. The Court observed that it has bought PAM and did not recall what its label said.¹⁷ Common sense tells us that while named plaintiffs might make a point of remembering in great detail their history with the products about which they have filed suit, but see Hawk Decl. II Ex. D (Jones Depo) at 56 (Q: “Have you purchased Hunt’s tomato paste since April 2008?” A: “Maybe. I don’t know.”), regular class members might not.

Thus in Xavier, Judge Alsup concluded that a proposed class of individuals with a twenty-or-more-pack-a-year smoking history was unascertainable because “[t]here is no good way to identify such individuals” and “we cannot expect smokers to recall the cumulative total of Marlboro packs they have smoked.” 787 F. Supp. 2d at 1089.¹⁸ Although Xavier is somewhat distinguishable on its facts (the class definition here does not require that class members have bought a particular number of Hunt’s products), its rejection of class member affidavits due to a “subjective memory problem” applies with equal force here, as the class

¹⁶ The Court notes that the “100% Natural” label was more widespread (i.e., more consistently present on more Hunt’s products) than the “free of artificial ingredients & preservatives” label. See generally Nagle Decl. In general there appears to be the least amount of label variation in the Hunt’s product group as compared to the other two product groups at issue. But there is still variation.

¹⁷ Of course, the Court and Plaintiff’s expert could presumably both go home, look in their pantries, and check what the labels say. But that means of verification “is incomplete for purposes of this action,” see Xavier, 787 F. Supp. 2d at 1090 (reaching same conclusion as to Marlboro Miles customer loyalty program, which would not capture all class members), and Plaintiffs have expressed no interest in certifying a class consisting only of people who currently have Hunt’s, PAM, or Swiss Miss products in their pantries.

¹⁸ The court further held that “[s]wearing ‘I smoked 146,000 Marlboro cigarettes’ is categorically different from swearing ‘I have been to Paris, France,’ or ‘I am Jewish,’ or even ‘I was within ten miles or the toxic explosion on the day it happened.’” Id. at 1090.

definition carves out some Hunt’s products that did not contain the challenged labels.¹⁹ See id. at 1090. Xavier’s concern that the defendant “would be forced to accept [class members’] estimates without the benefit of cross-examination” is also applicable. Id. The court in Red explained that “cases where self-identification alone has been deemed sufficient to render a class ascertainable generally involve situations where consumers are likely to have retained receipts. . . where the relevant purchase was a memorable bigticket item . . . or where the defendant would have access to a master list of either consumers or retailers who dealt with the items at issue.” 2012 WL 8019257, at *5 (collecting cases). This case fits none of those categories. Although this Court might be persuaded that a class of “all people who bought Twinkies,” for example, during a certain period, could be ascertained—one would at least have more confidence in class members’ ability to accurately self-identify—the variation in the Hunt’s products and labels makes self-identification here unfeasible.²⁰

Accordingly, the Court follows Xavier rather than Ries in this case. See Sethavanish, 2014 WL 580696, at *5 (“While [the Xavier] line of cases may restrict the types of consumer classes that can be certified, they do not bar certification in consumer class actions altogether.”). The class is unascertainable.²¹

In the end this question is not dispositive, because a “lack of ascertainability alone will generally not scuttle class certification.” Red, 2012 WL 8019257, at *6. This Order

¹⁹ Plaintiffs’ argument at the motion hearing that the variation in labels is “irrelevant” because products that do not contain the challenged label statements are “not at issue,” misses the point. Indisputably, such products are not at issue. The problem is that class members will not be able to remember whether they purchased the products that are not at issue, or the ones that are.

²⁰ To be clear, the Court does not fault Plaintiffs for failing to identify all class members prior to class certification, see Mauto, 2008 WL 2775004, at *4; it holds that Plaintiffs have not established how they will accurately identify all class members ever.

²¹ Moreover, the availability of a cy pres award does not solve the problem of not knowing who the class is:

[T]he cy pres doctrine governs distribution of unclaimed monies. Applicability of this doctrine presupposes a scenario in which plaintiffs have emerged victorious at the end of this litigation. The doctrine therefore does not help plaintiffs overcome the problem of how to enforce the res judicata effect of final judgment against an unsuccessful, unascertainable plaintiff class.

Xavier, 787 F. Supp. 2d at 1090-91.

1 therefore goes on to analyze the other Rule 23 factors—noting that, of course, “these
2 administrative difficulties implicate not only the threshold ascertainability question, but also
3 manageability and superiority concerns under Rule 23(b)(3).” See In re POM Wonderful
4 LLC, 2014 WL 1225184, at *6 n.8.

5 **b. PAM**

6 As to PAM, there are also significant ascertainability problems. Defendant makes the
7 same arguments that it did as to Hunt’s—that the class is overbroad and that there is no
8 objective, verifiable criteria for determining membership. See Opp’n to PAM Mot. at 7-11.

9 Again, the overbreadth determination turns on materiality: if the class constitutes
10 people who were exposed to a material misrepresentation, then it is not overbroad.

11 See Chavez, 268 F.R.D. at *376. This Order discusses materiality in its discussion of
12 23(b)(3) predominance.

13 Again, there is no good way to determine who bought the relevant products. Sturges
14 was unable to produce any receipts of PAM purchases. See Hawk Decl. I ¶ 2. It is unlikely
15 that any other customers would retain such receipts.²² And Defendant does not know who
16 the ultimate purchasers of its products are. Richardson Decl. ¶ 5. Moreover, that there are
17 seven varieties of PAM, id. ¶ 6, some which bore the “100% Natural” label and some of
18 which did not, id. ¶ 8, and that two of the products bearing the “100% Natural” label stopped
19 bearing that label in 2010, id. ¶ 13, makes it all the less likely that a consumer would
20 accurately remember whether he had been exposed to the label. Indeed, as Defendant notes,
21 because there were periods of time in which the same variety of PAM was on store shelves
22 with the “100% Natural” label and without that label, it will be hard for customers to
23 accurately self-identify even if they know, for example, that they bought a can of original
24 PAM in 2010. See Opp’n to PAM Mot. at 8 (citing Richardson Decl. ¶ 17). That some PAM
25 products during the class period had a “Made with 100% Natural Vegetable [or Canola] [or

26 _____
27 ²² Even if class members had receipts, the label changes did not alter the UPC of each PAM
28 product, and so for the PAM products for which the “100% Natural” label was removed, a receipt would
not show whether the PAM product purchased bore the old or new label. See Ugone Decl. (dkt. 161)
at 19-20 n.60; Richardson Decl. ¶ 18 (“although the content of the labels changed, the UPC codes on
the products remained the same.”).

Olive] Oil” label—a label not challenged by Plaintiffs—instead of a “100% Natural” label, see Richardson Decl. ¶¶ 8, 13, will cause further class member confusion. Plaintiffs cite Johnson v. General Mills, Inc., 276 F.R.D. 519, 521 (C.D. Cal. 2011), for the proposition that a UCL class should be certified when all class members were “misled by a common advertising campaign that had little to no variation.” See Reply to PAM Mot. at 2. Here, however, there was variation. It is no answer that “[i]f certain varieties of PAM never bore a ‘100% natural’ claim . . . then those products are not at issue.” See Reply to PAM Mot. at 2. The variety of products and of labels, combined with the lack of receipts and the low cost of the purchases, means that consumers are unlikely to accurately self-identify. Plaintiffs have offered no verifiable means of identifying class members. And so the Court finds that the class is unascertainable.

c. Swiss Miss

As to Swiss Miss, the parties make the same arguments and the Court reaches the same conclusion. See Opp’n to SM Mot. at 7-10; Reply to SM Mot. (dkt. 211) at 1-3. The class is not necessarily overbroad, but it is not verifiable. While Plaintiffs are correct in a sense that “[w]hether a putative class member bought a particular Swiss Miss cocoa product with the antioxidant label claims is an objective inquiry that can be answered by asking consumers a straightforward question to determine whether they are class members,” Reply to SM Mot. at 3, there is no way to know that the answers consumers give will be accurate. Given the variety of products and sizes, and the different timing for the label changes (such that some variants of Swiss Miss products had the challenged label statements for some points in the class period and not others, and during certain periods of time, versions of a given product with and without the challenged statements were for sale at the same time, see Kensicki Decl. ¶¶ 10-12), that a consumer simply recalls buying a Swiss Miss product in 2010, or even buying a Rich Chocolate 10 pack in 2010, does not establish that the consumer

1 was exposed to the challenged statement.²³ Accordingly, the Court finds the class
2 unascertainable.

3 **C. Rule 23(b)(2)**

4 Rule 23(b)(2) applies when “the party opposing the class has acted or refused to act on
5 grounds that apply generally to the class, so that final injunctive relief or corresponding
6 declaratory relief is appropriate respecting the class as a whole.” ““Class certification under
7 Rule 23(b)(2) is appropriate only where the primary relief sought is declaratory or
8 injunctive.”’ Ellis v. Costco Wholesale Corp., 657 F.3d 970, 986 (9th Cir. 2011).

9 **1. Hunt’s**

10 As to Hunt’s, Plaintiffs seek “an injunction to stop Defendant from continuing to
11 misbrand and sell its products in the same way it has done so during the class period.”
12 Hunt’s Mot. at 16. Defendant opposes certification of a Rule 23(b)(2) class, arguing that (1)
13 Plaintiffs failed to make a proper 23(a) showing, (2) Plaintiff seeks monetary relief, and (3)
14 Jones lacks standing because he no longer buys Hunt’s and does not intend to do so in the
15 future. Opp’n to Hunt’s Mot. at 25. This Order has already addressed the first argument.

16 Defendant’s second argument, about monetary relief, is not an insurmountable hurdle.
17 Plaintiffs assert that they are “not seeking certification of a (b)(2) class for [their] restitution
18 claims under the UCL, FAL, and CLRA or for their damages claim under the CLRA.” Reply
19 to Hunt’s Mot. at 15. And they cite Dukes for the proposition that damages incidental to an
20 injunction are still available. Id. This is not a controversial position, and nothing would
21 prevent the Court from following Ries, which granted class certification “for the purposes of
22 declaratory and injunctive relief and denied [it] to the extent plaintiffs seek monetary
23 damages, including restitution, refund, reimbursement and disgorgement.” 287 F.R.D. 523,
24 542; see also Lanovaz v. Twinings N. Am., Inc., No. 12-2646, 2014 WL 1652338, at *5
25 (N.D. Cal. Apr. 24, 2014) (same).

26
27
28 ²³ That the label was not even on the front of the products further undermines any confidence
the Court could have that a consumer would remember seeing it. See id. ¶ 10.

Defendant's third argument, about standing, is more persuasive. Courts have rejected the argument that a plaintiff cannot establish standing if he has learned that a label is misleading and therefore will not be fooled by it again. See Ries, 287 F.R.D. at 533 ("were the Court to accept the suggestion that plaintiffs' mere recognition of the alleged deception operates to defeat standing for an injunction, then injunctive relief would never be available in false advertising cases, a wholly unrealistic result."). Nonetheless, courts do require plaintiffs to express an intent to purchase the products in the future. See, e.g., Rahman v. Mott's LLP, No. 13-3482, 2014 WL 325241, at *10 (N.D. Cal. Jan. 29, 2014) ("to establish standing [for injunctive relief], plaintiff must allege that he intends to purchase the products at issue in the future")²⁴; Jou v. Kimberly-Clark Inc., No. 13-3075, 2013 WL 6491158, at *4 (N.D. Cal. Dec. 10, 2013) ("[b]ecause Plaintiffs fail to identify any allegation in their Complaint that suggests that they maintain an interest in purchasing the diapers or wipes, or both, in the future, Plaintiffs have not sufficiently alleged standing to pursue injunctive relief."); Moheb v. Nutramax Labs., Inc., No. 12-3633, 2012 WL 6951904, at *6 (C.D. Cal. Sept. 4, 2012) ("Plaintiff and other members of the Class no longer buy Cosamin and, thus, will obtain no benefit from an injunction concerning Defendant's advertising because they cannot demonstrate a probability of future injury."). This is somewhat problematic, policy-wise: if a plaintiff bought a product that claimed to be "nutritious" but actually contained arsenic, would he have to claim that he intends to buy it again? On the other hand, citric acid is not arsenic, and there is no way around the principle that a plaintiff must establish a "real and immediate threat of repeated injury" to establish standing for injunctive relief. See Jou, 2012 WL 6491158, at *4 (quoting Bates v. United Parcel Serv., Inc., 511 F.3d 974, 985 (9th Cir. 2007)).

Here, Jones testified that he "stopped buying" Hunt's products once he found out that they contained the challenged ingredients, and he did not attest to having any intention of buying Hunt's products in the future. See Hawk Decl. II Ex. D (Jones Depo) at 138. While

²⁴ In Rahman, Judge Illston changed her position on this issue, declining to follow her prior analysis in Larsen v. Trader Joe's Co., No. 11-5188, 2012 WL 5458396, at *4 (N.D. Cal. June 14, 2012).

1 Jones testified that he makes an effort to seek out natural foods in his diet, id. at 136, he also
 2 testified that he might actually prefer products not labeled “natural” depending on price,
 3 content and flavor. Id. at 75. He also, after filing the lawsuit, purchased other brands of
 4 canned tomatoes that contained citric acid and calcium chloride. See, e.g., id. at 114.
 5 Accordingly, Jones could have testified, if true, that he bought the Hunt’s products in
 6 reliance on the label because he seeks out natural products, but that he might purchase Hunt’s
 7 products in the future if they were properly labeled. He did not so testify. And Plaintiffs
 8 failed to respond to this argument in their reply brief, arguing only that the “class members
 9 are no longer being misled” argument (which Defendant does not make) “is unconscionable
 10 and contrary to the better-reasoned law on this issue.” Reply to Hunt’s Mot. at 15.

11 Plaintiffs argued for the first time at the motion hearing that a named plaintiff’s intent
 12 to purchase in the future is irrelevant, because what Plaintiffs are really seeking is akin to a
 13 public injunction under the UCL. But Judge Chhabria recently explained why this argument
 14 fails:

15 It may very well be that the legislative intent behind California’s consumer protection
 16 statutes would be best served by enjoining deceptive labeling. . . . But the power of
 17 federal courts is limited, and that power does not expand to accommodate the policy
 18 objectives underlying state law. See Hollingsworth v. Perry, 133 S.Ct. 2652, 2664
 (2013) (explaining that California’s policy-related interests in seeing ballot measures
 vigorously defended in court do not override federal standing limitations).

19 Garrison v. Whole Foods Mkt. Grp., Inc., No. 13-5222, 2014 WL 2451290, at *5 (N.D. Cal.
 20 June 2, 2014).

21 Accordingly, the Court finds that Plaintiffs lack standing under Rule 23(b)(2).

22 2. PAM

23 As to PAM, “Plaintiff seeks an injunction to stop Defendant from continuing to sell its
 24 unlawful products.” PAM Mot. at 14. Defendant opposes certification of a Rule 23(b)(2)
 25 class, arguing that (1) Plaintiffs failed to make a proper 23(a) showing, (2) Plaintiff seeks
 26 monetary relief, and (3) Sturges lacks standing because in 2010, “long before this action was
 27 filed, ConAgra ceased using a ‘100% natural’ claim on any PAM products containing
 28 hydrocarbon propellants,” and because Sturges no longer buys PAM products. Opp’n to

1 PAM Mot. at 25. This Order has already addressed the first argument, and the second is not
2 an insurmountable hurdle, as discussed above regarding Hunt's.

3 Defendant's third argument, about standing, is again persuasive. Plaintiffs point to no
4 evidence that Sturges intends to buy PAM products again. She testified that she still has two
5 cans of PAM and that she has not used them at all since the litigation was filed. Hawk Decl.
6 I (Sturges Depo) Ex. A at 144. Without any evidence that Sturges plans to buy PAM
7 products in the future, she does not have standing to bring an injunctive class. Jou, 2012 WL
8 6491158, at *4. Again, Plaintiffs failed to respond to this argument in their reply brief,
9 see Reply to PAM Mot. at 12 (arguing about monetary relief).²⁵ The Court finds that
10 Plaintiffs lack standing under Rule 23(b)(2).

11 3. Swiss Miss

12 As to Swiss Miss, "Plaintiff seeks an injunction to stop Defendant from continuing to
13 misbrand and sell its products in the same way it has done during the class period." SM Mot.
14 at 14. Defendant opposes certification of a Rule 23(b)(2) class, arguing that (1) Plaintiffs fail
15 to make a proper 23(a) showing, (2) Plaintiff seeks monetary relief, and (3) Sturges lacks
16 standing to seek injunctive relief because she no longer buys Swiss Miss and has not alleged
17 any intent to do so in the future. Opp'n to SM Mot. at 24 (citing Hawk Decl. II Ex. A at 144)
18 (Sturges has not used any Swiss Miss products since litigation was filed). The 23(a)
19 argument is persuasive, as discussed above. And Plaintiffs again fail to respond to
20 Defendant's future injury argument—instead taking on the straw horse of Plaintiff not getting
21 fooled again, see Reply to SM Mot. at 15. This is a fatal flaw. Accordingly, the Court finds
22 that Plaintiffs lack standing under Rule 23(b)(2).

23 //

25 ²⁵ Defendant's argument that an injunction is also unnecessary because Defendant no longer uses
26 the "100% Natural" label on products with hydrocarbon propellants, Opp'n to PAM Mot. at 25, is not
27 persuasive. The Organic Olive Oil and Organic Canola Oil varieties of PAM continue to bear the label,
28 which Plaintiffs allege is misleading. See Richardson Decl. ¶ 19; PAM Mot. at 2. In addition,
Defendant states elsewhere that "[a]fter any label change is made, a period follows in which ConAgra
and its retailers have a mix of old and new labeled product in their facilities." Opp'n to PAM Mot. at
3. Accordingly, there could still be some PAM varieties with hydrocarbon propellants and "100%
Natural" labels on the shelves; an injunction could lead to those products being pulled.

D. Rule 23(b)(3)

Rule 23(b)(3) provides that a class may be maintained where “questions of law or fact common to class members predominate over any questions affecting only individual members,” and a class action would be “superior to other available methods for fairly and efficiently adjudicating the controversy.”

1. Predominance

a. Individual Determinations

Rule 23(b)(3)’s predominance requirement is more stringent than Rule 23(a)(2)’s commonality requirement, and “tests whether the proposed classes are sufficiently cohesive to warrant adjudication by representation.” Wang, 737 F.3d at 545 (quoting Hanlon, 150 F.3d at 1022).

i. Hunt’s

As to Hunt’s, Defendant argues that individual questions of reliance predominate. Opp’n to Hunt’s Mot. at 16-20. Plaintiffs argue that “[t]he predominant issue is whether [the challenged Hunt’s] labels are misbranded as alleged under California law,” and “there are no individual reliance components (individual issues) for Plaintiff’s UCL, FAL and CLRA claims.” Hunt’s Mot. at 17.

Plaintiffs argue that, under the UCL and the FAL, they need not establish the class’s reliance at all. Hunt’s Mot. at 18. In re Tobacco II Cases, upon which Plaintiffs rely, held that, for the purposes of standing, so long as the representative plaintiff can establish causation and injury under the UCL, the class members will also have standing. 46 Cal. 4th 298, 315-16 (2009). That case “does not stand for the proposition that causation and injury should be inferred on a class-wide basis” in every case. Campion v. Old Republic Home Prot. Co., 272 F.R.D. 517, 533 n.4 (S.D. Cal. 2011). Nor did it “eliminate the need to satisfy the requirements for class certification, including the predominance requirement.” Id.; see also Hodes, 2009 WL 2424214, at *4 (explaining that “[w]hile proof of individual reliance may not be necessary to assert claims under the FAL and UCL,” citing In re Tobacco II, “[c]ourts in the Ninth Circuit and in California have regularly found that where such inquiries

predominate over common questions . . . courts may refuse to certify a class action.”); Cohen v. DIRECTV, Inc., 178 Cal. App. 4th 966, 981 (2009) (limiting Tobacco II holding to standing and finding it “irrelevant” as to commonality). Thus, in Stearns, 655 F.3d at 1020, which relied on In re Tobacco in reversing and remanding a district court’s denial of class certification, the Ninth Circuit explained: “We do not, of course, suggest that predominance would be shown in every California UCL case. For example, it might well be that there was no cohesion among the members because they were exposed to quite disparate information from various representatives of the defendant.” Here, there is a lack of cohesion among the class members, both because consumers were exposed to label statements that varied by can size, variety, and time period (and the challenged ingredients also differed), but more importantly because “even if the challenged statements were facially uniform, consumers’ understanding of those representations would not be.” See Opp’n to Hunt’s Mot. at 19. As discussed below, there is no fixed meaning for the word “natural.”^{26 27}

Under the CLRA, each class member must “have an actual injury caused by the unlawful practice,” see Stearns, 655 F.3d at 1022, but a plaintiff may demonstrate that a defendant’s alleged deceptive conduct caused the same damage to the class by showing that the alleged misrepresentation would have been material to reasonable persons, see In re Steroid Hormone Prod. Cases, 181 Cal. App. 4th 145, 156-57 (2010). Under California law, a misrepresentation is material “if a reasonable man would attach importance to its existence or nonexistence in determining his choice of action in the transaction in question.” Id. at 157 (internal quotation marks omitted). “If the misrepresentation or omission is not material as to all class members, the issue of reliance ‘would vary from consumer to consumer’ and the

²⁶ In their reply brief, Plaintiffs cite to Hinojos, 718 F.3d at 1107, which held that a legislative decision to prohibit a particular misleading advertising practice is evidence that the practice is a material misrepresentation. Reply to Hunt’s Mot. at 12. But Plaintiffs point to no relevant legislation about the word “natural,” and in fact their brief discusses “legislative regulation of the antioxidant statements,” which has nothing to do with the Hunt’s products. Id.

²⁷ In addition, as already noted, Jones does not have standing to represent a class of individuals who would not have purchased the products at issue if they had known that those products were illegally labeled. An “unlawful” theory will not solve Plaintiffs’ reliance problem.

1 class should not be certified.” Stearns, 655 F.3d at 1022-23 (citing In re Vioxx Class Cases,
2 180 Cal. App. 4th 116, 129 (2009)).

3 Plaintiffs’ materiality argument—that “[u]ndoubtedly, a reasonable consumer would
4 attach significance to the challenged label statements” and that defendant must believe that
5 the statements are material or it would not have included them on its labels—is rather weak.
6 See Hunt’s Mot. at 11.²⁸ The only evidence Plaintiffs rely on in support of this contention is
7 the Caswell Declaration. Id. Caswell, Plaintiffs’ materiality expert, concluded that “In my
8 experience with labeling statements and consumer choice, it is my opinion that the
9 [challenged statements] would be material to a reasonable consumer.” Caswell Decl. (dkt.
10 189-5) ¶ 27. She concluded that the “100% Natural” label would be material “because
11 reasonable consumers would rely on this label to identify products that are natural and in
12 comparison shopping between food products” and that the “Free of artificial ingredients &
13 preservatives” label “is material because consumers would rely on this label to identify
14 products that do not contain both (a) artificial ingredients and (b) preservatives in comparison
15 shopping between food products.” Id. ¶¶ 27-28. This is a bit of an ipse dixit.

16 Caswell did not explain how the challenged statements, together or alone, were a
17 factor in any consumer’s purchasing decisions. She did not survey any customers to assess
18 whether the challenged statements were in fact material to their purchases, as opposed to, or
19 in addition to, price, promotions, retail positioning, taste, texture, or brand recognition. See
20 Hanssens Decl. (dkt. 204) ¶¶ 12-26. Caswell acknowledged in her deposition that some
21 customers have never noted the “natural claim,” have never looked at the ingredients list,
22 would buy a product regardless of whether the product says “natural,” and do not care about
23 labeling statements. Hawk Decl. II Ex. B (Caswell Depo) at 191-93. She also testified that

27 ²⁸ Defendant submits evidence that it did not alter its prices to retailers depending on whether
28 the “Free of Artificial Ingredients & Preservatives” label appeared on the label. See Opp’n to Hunt’s
Mot. at 18 (citing Nangle Decl. ¶ 8). At best, Defendant’s decision to include the representations
indicates that Defendant hoped that the representations could be material to some customers.

1 she personally “do[es] not pay much attention to ‘natural’ claims,” because “[t]hey’re not
2 important to [her] in [her] purchase decisions.” Id. at 116-17.²⁹

3 Caswell’s rather startling admission might have something to do with the fact that
4 there is no single, controlling definition of the word “natural.” See Pelayo v. Nestle USA,
5 Inc., No. 13-5213, 2013 WL 5764644, at *4-5 (C.D. Cal. 2013) (discussing lack of a
6 common understanding of the term “all natural” that is shared by reasonable consumers). It
7 is undisputed that the FDA has not defined the word “natural.” See Lockwood v. ConAgra
8 Foods, Inc., 597 F. Supp. 2d 1028, 1034 (N.D. Cal. 2009) (“Although the FDA
9 acknowledges that consumers are being misled by the use of the term ‘natural,’ it has
10 declined to adopt any regulations governing this term.”); “Defining Natural Foods,” 26
11 Regent U.L. Rev. at 330 (explaining that in 1991, the FDA adopted an “informal policy” that
12 “natural means merely that ‘nothing artificial or synthetic (including colors regardless of
13 source) is included in, or has been added to, the product that would not normally be expected
14 to be there,’” but that such “policy carries only the weight of an advisory opinion, and it does
15 not establish a legal requirement.”). Moreover, it is not clear that the challenged ingredients
16 here are not “natural.” See Hawk Decl. II Ex. H (Michelizzi Decl.) ¶¶ 2-3 (ConAgra
17 purchases calcium chloride from a natural source; ConAgra’s citric acid is purchased from
18 suppliers who manufacture it using “a natural process of fermentation, using naturally
19 defined carbohydrates, and [it] is confirmed to be natural by these suppliers.”); RJN (dkt.
20 206) Ex. B (FDA letter of May 8, 2012 stating that, provided citric acid was from a natural
21 source, “we would not take issue with its use on a product labeled as ‘natural.’”).

22 While the Court has no trouble believing that the “100% natural” claim is material to
23 some customers, Caswell’s testimony does not demonstrate that it is necessarily “material to
24 reasonable consumers.” See In re Steroid Hormone Prod. Cases, 181 Cal. App. 4th at 156-
25 57. This Court held in Badella v. Deniro Mktg. LLC, No., 10-3908, 2011 WL 5358400, at
26 *9 (N.D. Cal. Nov. 4, 2011), that “[m]ateriality is an objective standard, but still, Plaintiffs

27
28 ²⁹ Caswell further testified that she did not think her husband was deceived in purchasing the
bottle of PAM they had at home “but I don’t think he was necessarily paying attention to ‘100 percent’
claims.” Hawk Decl. I Ex. D (Caswell Depo) at 104.

will need to point to some type of common proof, particularly given Defendant's arguments that people join Amateur Match for many different reasons and for many different purposes." Here, although only two challenged label statements are at issue, there are numerous reasons a customer might buy Hunt's tomatoes, and there is a lack of evidence demonstrating the impact of the challenged label statements. Accordingly, Plaintiffs lack common proof of materiality. See also Astiana, 291 F.R.D. at 508 (finding inadequate showing of materiality where "Plaintiffs fail to sufficiently show that 'All Natural' has any kind of uniform definition among class members, that a sufficient portion of class members would have relied to their detriment on the representation, or that Defendant's representation of 'All Natural' in light of the presence of the challenged ingredients would be considered to be a material falsehood by class members.")³⁰; Algarin Order at 16 (holding, as to commonality under Rule 23(a)(2), that "given the persuasive evidence presented on consumer expectations, the varying factors that influence purchasing decision[s], and consumer satisfaction, the Court finds that Plaintiffs have also failed to demonstrate that the elements of materiality and reliance are subject to common proof."); but see Werdebaugh v. Blue Diamond Growers, No. 12-2724, 2014 WL 2191901, at *12-14, 18 (N.D. Cal. May 23, 2014) (finding that materiality is a question common to the class, noting that representations did not differ for each proposed class member, concluding that predominance was met for the same reason commonality was met).³¹

Even assuming that Plaintiffs had met their burden as to reliance, however, there are other individual questions that threaten to predominate. In Hodes, 2009 WL 2424214, at *4, the court explained that there were "individualized purchasing inquiries" that would need to

³⁰ That court went on to note that even the named plaintiffs disagreed about the definition of "all natural," id., which is also the case here, see Opp'n to Hunt's Mot. at 7 (to Jones, natural "means that the contents of the package contain products that come from nature"; to Sturges, natural means "no added chemicals" and for tomatoes means "just the tomato"; and to Ozzard, natural means "nonprocessed.").

³¹ Judge Koh noted in that case that "Blue Diamond does not assert that differences in its products' labels cause prospective consumers to understand the representations differently." Id. at 25. Although Defendant here does not point to differences in its products labels, it certainly argues—and the record reflects—that consumers understood, and weighed, the 100% natural representations differently.

be made. Explaining that courts in this Circuit have refused to certify classes where such inquiries predominated, the court declared itself “not convinced that the common questions of Van’s liability would predominate over the individual questions of who purchased Van’s frozen waffles during the relevant class period, which kind of frozen waffles they purchased, how many they purchased, and whether the kinds they purchased contained false nutritional information.” Id. Whether this is a predominance question, an ascertainability question, or a manageability question, it is also the case here that “ConAgra has no way to determine, through IRI data or otherwise, who the purchasers of its canned tomato products are, i.e., the identity of class members.” Opp’n to Hunt’s Mot. at 6. And it is true that individualized purchasing inquiries will be required to determine how many and which kind of Hunt’s products each class member bought.

Accordingly, the Court finds that individual inquiries predominate over common ones as to Hunt’s.

ii. PAM

As to PAM, Plaintiffs face the same problems. Plaintiffs point to Defendant’s common conduct of (1) misbranding PAM products as “100% Natural” when they were not, and of (2) identifying a group of ingredients as “propellant,” and argue that such common conduct predominates over any individual questions. PAM Mot. at 16.³²

Plaintiffs’ argument under the UCL is that “class-wide reliance is not required.” PAM Mot. at 18. But the Ninth Circuit recognized in Stearns, 655 F.3d at 1020, that predominance would not “be shown in every California UCL case,” such as where there is “no cohesion among the members.” As with Hunt’s, there is a lack of cohesion among the class members here, both because consumers were exposed to label statements that changed over time and from product to product, and, more importantly, because “even if the challenged statements were facially uniform, consumers’ understanding of those representations would not be.” See Opp’n to PAM Mot. at 19. As already discussed, there is no fixed meaning for the word

³² Defendant notes that Plaintiffs fail to address predominance as to the FAL and unjust enrichment claims. Opp’n to PAM Mot. at 15 n.6. Plaintiffs reply that they do seek certification of those claims. Reply to PAM Mot. at 8 n.4.

1 “natural.” And, as Defendant notes, Plaintiffs’ objection to the term here relates to the
 2 propellant; it is not clear that Plaintiff or anyone else would understand the “natural” claim to
 3 extend to such substances. See Hawk Decl. I Ex. A (Sturges Depo) at 109-110 (Q: “Can a
 4 food delivered with a propellant . . . be natural?” A: “I don’t really know.”), 129-30 (food she
 5 was intending to consume was cooking oil, not propellant, and she does not understand the
 6 cooking oil in PAM to be made up in part of propellant); Hawk Decl. I Ex. D (Caswell Depo)
 7 at 151 (Q: “Do consumers understand a ‘natural’ claim on PAM to pertain to the propellant?”
 8 A: “Again, I have not studied that. . . . As a result, I do not know.”).

9 Plaintiffs’ argument under the CLRA is that “class-wide reliance is presumed when
 10 the misrepresentations or omissions would have been material to ‘reasonable persons.’”
 11 PAM Mot. at 19. But Plaintiffs again rely entirely on the Caswell Declaration to establish
 12 materiality, id., and that Declaration is again lacking, see Caswell Decl. (dkt. 128-1) ¶ 26
 13 (“The labeling of the product as ‘100% Natural[.]’ is material because reasonable consumers
 14 would rely on this label to identify products that are natural and in comparison shopping
 15 between food products.”).³³ As with Hunt’s, Caswell did not explain how the challenged
 16 statement was a factor in any consumer’s purchasing decisions. She did not survey any
 17 customers. She testified that some percentage of PAM consumers never noted the natural
 18 claim on the label, never looked at the ingredient list, bought PAM because they grew up
 19 using it and would buy PAM regardless of the natural label, and do not care what the
 20 propellant is made from. Hawk Decl. I Ex. D (Caswell Depo) at 191-93. She further
 21 testified that the “most important attributes of PAM” will vary “by consumer.” Id. at 211.
 22 And of course she testified that she does “not pay much attention to ‘natural’ claims” in
 23 making her own purchasing decisions. Id. at 116. As with Hunt’s, Plaintiffs have failed to
 24 demonstrate materiality. See Astiana, 291 F.R.D. at 508.

25
 26
 27 ³³ Notably, Caswell’s opinion is limited to the PAM products “containing significant quantities
 28 of undisclosed petrochemicals such as Petroleum Gas (liquified), Propane, Propane 2-methyl (Isobutane)
 and Butane that comprise 24% or more of the products’ ingredients,” Caswell Decl. ¶ 25; it does not
pertain to the organic PAM products, which used a different propellant, see Opp’n to PAM Mot. at 4.

Also, as with Hunt's, even assuming that Plaintiffs had met their burden as to reliance, other individual questions threaten to predominate. See Hodes, 2009 WL 2424214, at *4. Here, too, individualized purchasing inquiries will be required to determine how many PAM products each class member bought, which kind of PAM products they bought, when they bought them, and what label they bore.

Accordingly, the Court finds that individual inquiries predominate over common ones as to PAM.

iii. Swiss Miss

As to Swiss Miss, Plaintiffs again fall short. Plaintiffs argue that "Defendant's label statements on a given product are the same, everywhere in California. So, all consumers would have seen the same labeling claims as Plaintiff. Further, there are no individual reliance components (individual issues) for Plaintiff's UCL, FAL and CLRA claims." SM Mot. at 15-16.

Plaintiffs' argument under the UCL is again that "class-wide reliance is not required." SM Mot. at 16. But predominance cannot be shown where there is "no cohesion among the members." See Stearns, 655 F.3d at 1020. As with Hunt's and PAM, there is a lack of cohesion among the class members here. Consumers were exposed to label statements that changed over time, at different times, from product to product. Although the class is limited to Swiss Miss products that included antioxidant statements, some class members will never have seen the challenged statements (because the statements were on the top or back of the products, for example), and there is no way to determine whether a class member ever bought a product with a challenged statement on it.

Plaintiffs seek to avoid any need for proof by arguing that the labels are illegal: "If Defendant's labels violate the unlawful prong of the UCL, the inquiry ends there and whether unnamed class members relied on the relevant statement is not an issue before the Court." SM Mot. at 16 (citing In re Steroid Hormone Prod. Cases, 181 Cal. App. 4th at 155). But In re Steroid Hormone Prod. Cases involved a product (a bodybuilding drug) that was illegal because of what it was (a Schedule III substance unlawful to sell or possess without a

prescription), not how it was labeled. 181 Cal. App. 4th at 155. Swiss Miss hot cocoa—even if it was mislabeled—is not analogous to a Schedule III substance. See Gitson v. Trader Joe’s Co., No. 13-1333, 2013 WL 5513711, at *6 (N.D. Cal. Oct. 4, 2013) (distinguishing In re Steroid Hormone Prod. Cases, holding in case about yogurt, soy milk, and other grocery products that court would “not presume that a reasonable person would not have purchased the products at issue had the person known of the alleged mislabeling.”). Even if the products were analogous, Sturges has disavowed the “unlawful” theory. See Hawk Decl. II Ex. A (Sturges Depo) at 88.

Plaintiffs’ argument under the CLRA is that “class-wide reliance is presumed when the misrepresentations or omissions would have been material to ‘reasonable persons.’” SM Mot. at 16. But Plaintiffs again rely entirely on the Caswell Declaration to establish materiality, see Reply to SM Mot. at 7,³⁴ and that Declaration is again lacking, see Caswell Decl. (dkt. 190-4) ¶ 27 (“The labeling of the product as containing “antioxidants” is material because reasonable consumers would rely on this label to identify products that have particular nutrition attributes and in comparison shopping between food products.”). As with Hunt’s and PAM, Caswell did not explain how the (apparently factually accurate) challenged statements were a factor in any consumer’s purchasing decisions. She did not survey any customers. In addition, Caswell testified that individual consumers’ perceptions of what affects their purchasing decisions would be important in determining the materiality of label statements, Hawk Decl. II Ex. B (Caswell Depo) at 66-68, but that she has no knowledge of how customers viewed the challenged statement, id. at 58-60. Caswell acknowledged that some consumers do not read food labels at all beyond the brand and type of food, and that others do not care about labeling statements and would purchase products regardless of their labels. Id. at 191-93, 211. She also asserted that the word “delicious” would be material, and

³⁴ To the extent that Plaintiffs in their reply brief seek to rely on “the legislative decision to prohibit certain types of label statements regarding antioxidants,” Reply to SM Mot. at 8, section 101.54 pertains to the level of antioxidants in a product, not simply their presence. That the legislature prohibited statements about the amount of antioxidants is not conclusive evidence that all statements about antioxidants are material. See also Hawk Decl. II Ex. A (Sturges Depo) at 98 (Sturges testified that she did not interpret the challenged label statement to say anything about the amount of antioxidants in the products.).

1 that “all the information that appears on labels is of use to consumers and, yeah it’s material
2 or could be material.” Id. at 125 (emphasis added); compare Hanssens Decl. (dkt. 200) ¶¶
3 29-33 (“Given the heterogeneity in the purchase decision process, it is speculative to assume
4 that the [challenged label statements] on Swiss Miss hot cocoa products were a factor in the
5 purchase decision for all or many of the putative class members, absent evidence directly
6 supporting that assumption.”)

7 Also, as with Hunt’s and PAM, even assuming that Plaintiffs had met their burden as
8 to reliance, other individual questions threaten to predominate. See Hodes, 2009 WL
9 2424214, at *4. Here, too, individualized purchasing inquiries will be required.

10 Accordingly, the Court finds that individual inquiries predominate over common ones
11 as to Swiss Miss.

12 **b. Damages**

13 In Comcast Corp. v. Behrend, 133 S.Ct. 1426, 1433-34 (2013), the Supreme Court
14 held that in order to satisfy the predominance inquiry, plaintiff must also present a model that
15 (1) identifies damages that stem from the defendant’s alleged wrongdoing and (2) is
16 “susceptible of measurement across the entire class.” 133 S.Ct. at 1433-34. Finding that
17 plaintiffs’ damages model did not isolate damages resulting from the accepted theory of
18 antitrust impact, the Court reversed the district court’s certification of the class. Id. at 1435.
19 “At class certification, plaintiff must present a likely method for determining class damages,
20 though it is not necessary to show that his method will work with certainty at this time.”
21 Chavez, 268 F.R.D. at 379 (internal quotation marks omitted). Individualized damage
22 calculations alone cannot defeat class certification. See Leyva v. Medline Indus., Inc., 716
23 F.3d 510, 513 (9th Cir. 2013) (citing Yokoyama v. Midland Nat’l Life Ins. Co., 594 F.3d
24 1087, 1094 (9th Cir. 2010)).

25 **i. Hunt’s**

26 As to Hunt’s, Plaintiffs assert that their expert, Dr. Oral Capps, Ph.D., has set forth
27 “sound methods by which the Court may award restitution or a jury may award damages.”
28

Hunt's Mot. at 19 (citing Capps Decl. (dkt. 189-7)). Plaintiffs seek restitution under the UCL and FAL, and damages under the CLRA. Id.

Capps asserts that "Restitution may be partial, such as in the form of the wholesale price of the products; full, such as in the form of the retail price of the products; or restitution [sic], such as in the form of differences in prices between Defendant's products and similar products not marketed with the unlawful and misleading label statements." Capps Decl. at 4. Return of the full retail or wholesale prices is not a proper measure of restitution,³⁵ as it fails to take into account the value class members received by purchasing the products.³⁶ Judge Seeborg recently reiterated that "[t]he difference between what the plaintiff paid and the value of what the plaintiff received is a proper measure of restitution." Ries v. Ariz. Beverages USA LLC, No. 10-1139, 2013 WL 1287416, at *7 (N.D. Cal. Mar. 28, 2013) (citing Vioxx, 180 Cal. App. 4th at 131); see also Lanovaz, 2014 WL 1652338, at *6 ("The proper measure of restitution in a mislabeling case is the amount necessary to compensate the purchaser for the difference between a product as labeled and the product as received."); In re POM Wonderful, 2014 WL 1225184, at *3 (also citing Vioxx, 180 Cal. App. 4th at 131). Plaintiffs' assertion that "restitution is not limited to the difference between what the plaintiff received versus what he or she paid," Reply to Hunt's Mot. at 14, is therefore incorrect in this context.³⁷

³⁵ Using the full retail or wholesale price does not represent the economic loss attributable to the alleged wrongful conduct. See Ugone Decl. (dkt. 196-3) at 17-20.

³⁶ Capps asserts in a reply declaration that he "did not ignore the value received by class members from the purchase and use of the subject products in question," he just "did not consider this issue to be relevant especially when operating under the assumption that the misbranded or challenged products are worthless from a legal standpoint." Capps Reply Decl. (dkt. 209) at 6.

³⁷ Plaintiffs argue that the Ninth Circuit held in FTC v. Figgie Int'l, 994 F.2d 595, 606 (9th Cir. 1993), that once a defendant is liable for deceptive practices, recovery is not limited "to the difference between what [plaintiffs] paid and a fair price for [the product]." Id. at 14 n.6. Figgie is distinguishable. Importantly, the FTC brought that case to seek consumer redress under the FTC Act, 15 U.S.C. § 57b. 994 F.2d at 598. That statute allows a court to "grant such relief as the court finds necessary to redress injury to consumers or other persons, partnerships, and corporations resulting from the rule violation or the unfair or deceptive act or practice, as the case may be. Such relief may include, but shall not be limited to, rescission or reformation of contracts, the refund of money or return of property, the payment of damages, and public notification respecting the rule violation or the unfair and deceptive act or practice, as the case may be." Id. at 605 (citing 15 U.S.C. § 57b(b)). The language Plaintiffs cite comes

The other means of calculating restitution that Capps offers (he later refers to this as the “benefit of the bargain approach”) is to take a comparable product and compare the price between it and the allegedly mislabeled Hunt’s product. See Capps Decl. at 5-6. On February 4, 2014, at the Safeway Kitchens in San Jose, California, Hunt’s canned tomato sauce labeled “100% Natural” and “Free of artificial ingredients & preservatives” in a 15 ounce can, containing citric acid as an ingredient, sold for \$1.49, or 9.9 cents per ounce. Id. at 6. Safeway Kitchens canned tomato sauce labeled “100% Natural” but not containing citric acid and not labeled “Free of artificial ingredients & preservatives” in a 15 ounce can sold for \$0.99, or 6.6 cents per ounce. Id. Capps concludes that “[t]he price difference per ounce subsequently amounts to 3.33 cents per ounce.” Id. Capps promises that “additional comparable products are likely to be identified,” and asserts that “[t]he difference in the price of the ConAgra products from comparable products without the misbranding statement . . . constitutes the damages per unit sold.” Id. at 6-7.

This approach is deeply flawed. It is inadequate to identify a single comparator, given the seven product lines and multiple varieties within each Hunt’s product line. See Nagle Decl. ¶ 6 (listing all Hunt’s products).³⁸ Even the single comparator that Capps selects is inadequate—first, because it has a 100% natural statement, so it cannot demonstrate any price difference associated with that statement, see Ugone Decl. ¶¶ 33-34, and second, because Safeway is a generic brand, while “Hunt’s is a market leader that has spent decades building a brand synonymous with canned tomatoes,” id. ¶¶ 37-38. One cannot assume that the entire price difference between the Hunt’s and Safeway cans is attributable to the alleged misstatements. See In re POM Wonderful, 2014 WL 1225184, at *5 (“Rather than answer the critical question of why that price difference existed, or to what extent it was a result of Pom’s actions, Nolte instead assumed that 100% of that price difference was attributable to

from the court’s discussion of an appropriate refund. See id. at 606. There is no reason to import the remedies from the FTC Act into a California UCL or FAL case, and Plaintiffs point to no authority that does so.

³⁸ Defendant’s expert, Keith R. Ugone, Ph.D., opines that “given the complexity of the Hunt’s . . . product lines (e.g. large numbers of segments and multiple flavors in each segment), it is not clear that suitable benchmark products exist for each Challenged Product.” Ugone Decl. ¶ 35.

Pom's alleged misrepresentations. . . . This damages 'model' does not comport with Comcast's requirement that class-wide damages be tied to a legal theory.").

To calculate damages under the CLRA, Capps points to the difference in price between Hunt's products and comparator products, Capps Decl. at 6, discussed above, as well as regression analysis. But the regression analysis he proposes is vague and abstract:

With the econometric or regression approach, the key finding is the difference in sales of the respective products before and after the claims made by ConAgra first appeared on the labels. To glean this difference in sales while controlling for other factors which may be related to sales, the appropriate methodological approach is the use of econometric analysis with dummy variables. . . . The subsequent calculations of damages rests on the estimated coefficients associated with these dummy variables, controlling for other factors that may also affect sales.

Id. at 8-9. Capps does not provide a clearly defined list of variables, he has not determined whether the data related to any or all of his proposed control variables exists, and he has not determined, or shown how he would determine, which competing and complementary products he would use. See Ugone Decl. ¶ 50. In Kottaras v. Whole Foods Market, Inc., 281 F.R.D. 16, 25-27 (D.D.C. 2012), where Capps had "not yet performed a single regression,"³⁹ [and] could not even tell the Court the precise analyses he intended to undertake," the court found that his proposed methodology was "not sufficiently developed to meet Plaintiff's burden of showing that common questions predominate." The Court reaches the same conclusion here. Plaintiffs have not presented an adequate damages model as to Hunt's.⁴⁰

ii. PAM

As to PAM, Plaintiffs face the same problems.

Capps proposes to effect restitution under the UCL and FAL simply by "return of the purchase price" to class members. Capps Decl. (dkt. 128-7) ¶ 6; Hawk Decl. I Ex. E (Capps Depo) at 90 (assuming class members "would be refunded 100 percent of the price he or she

³⁹ Capps did a "preliminary regression[]" in his reply declaration here, Capps Reply Decl. ¶ 19 & figs. 5-6, but Defendant complains that it does "not include the variable that he previously identified as his 'key finding': a variable associated with the presence of absence of the Challenged Claims . . . over time." Obj. to Reply Decl. (dkt. 215) at 3.

⁴⁰ The Court observes that Judge Koh recently assessed Capps's work in Werdebaugh, 2014 WL 2191901, at *21-26, and while she rejected his restitution analysis for many of the reasons discussed herein, see id. at *22-23, she found that his regression analysis was "sufficient," id. at *24-26.

1 paid for the product.”). That method does not account for the value class members received
 2 from the PAM products, and so it is incorrect. See Ries, No. 10-1139, 2013 WL 1287416, at
 3 *7 (citing Vioxx, 180 Cal. App. 4th at 131). Capps acknowledges that PAM is not
 4 “economically worthless.” Hawk Decl. I Ex. E (Capps Depo) at 91. And he admits that,
 5 absent the legal assertion that PAM products had no value to class members, his restitution
 6 analysis would have no correlation to any economic injury suffered. Id. at 101. He further
 7 concedes that his model would not work without “some sort of proof of purchase,”
 8 “[o]therwise, some consumers would be inappropriately compensated.” Id. at 93-94. But
 9 Capps does not know what individual class members paid, and neither does Sturges.
 10 See Hawk Decl. I Ex. A (Sturges Depo) at 73, 150, 152 (Sturges does not know what she
 11 paid for PAM purchases, does not know if she suffered financial injury, does not know if
 12 they were worth what she paid for them).

13 Capps again proposes calculating damages under the CLRA via a benefit-of-the-
 14 bargain analysis, see Capps Decl. ¶¶ 10-14, or a regression analysis, see id. ¶¶ 15-21. But he
 15 fails to identify a comparator product in order to calculate a percentage of overpayment. See
 16 Capps Decl. ¶ 14 (“With sufficient discovery, I can ascertain whether there are comparable
 17 products with which to conduct the benefit of the bargain analysis.”). And he admitted in his
 18 deposition that he does not know whether such a comparator product exists. Hawk Decl. I
 19 Ex. E (Capps Depo) at 153-54 (Q: “do you intend to compare PAM to competitive cooking
 20 sprays with hydrocarbon propellants that do not have 100% natural on the label? Is that what
 21 you’re intending to do?” A: “I suppose I’ll have to. . . .” Q: “Are there such competitive
 22 products on the market that use hydrocarbon propellants but don’t have 100% natural on the
 23 label?” A: “I don’t know that for sure.”). He also asserts that “The difference in the price of
 24 the ConAgra cooking spray products from comparable cooking spray products constitutes the
 25 damages per unit sold,” Capps Decl. ¶ 14, but does not explain why the entire price
 26 difference is attributable to the challenged statement.

27 Capps’s regression analysis is as vague and untested as it is with Hunt’s. See Ugone
 28 Decl. (dkt. 161) at 20-22. Plaintiffs’ reply that “Dr. Ugone does not consider Dr. Capps’[s]

complete deposition testimony in which he clearly describes the blueprint of the explanatory variables to be used in the regression analysis,” without any citation to that testimony, see Reply to PAM Mot. at 11, is clearly inadequate. Moreover, Capps testified that the overpayment percentage he expects to calculate under either the benefit of the bargain or the regression approach must be multiplied by the specific purchase price a class member paid in order to convert it to an actual damages award. Hawk Decl. I Ex. E (Capps Depo) at 89-90 (describing how allocation would work, requiring “some proof of purchase”), 142 (“I don’t know how a consumer would be compensated without proof”). Again, Plaintiffs point to no accurate way to determine what class members actually paid. See Red, 2012 WL 8019257, at *11 (“While the amount of [a] premium might be established on a class-wide basis, Plaintiffs cannot get around the fact that individual class members, to recover, would need to show, at a minimum, proof of how many purchases they made of the offending products.”)

Plaintiffs have not presented an adequate damages model as to PAM.

iii. Swiss Miss

As to Swiss Miss, Plaintiffs also fall short.

Capps proposes to effect restitution under the UCL and FAL “using average retail prices, average wholesale prices, or using a ‘benefit of the bargain’ approach.” SM Mot. at 18. The Court has already concluded that return of the full purchase price is improper under Ries, No. 10-1139, 2013 WL 1287416, at *7 (citing Vioxx, 180 Cal. App. 4th at 131), because it does not account for the value class members received from the Swiss Miss products. The benefit of the bargain approach here is also problematic because Capps identified just one comparable product. On February 4, 2014, at a Safeway Kitchens in San Jose, California, a 10 ounce package of Swiss Miss hot cocoa mix containing an antioxidant claim sold for \$3.39, or 33.9 cents per ounce. Capps Decl. (dkt. 190-3) ¶ 15. Capps also identified a Safeway Kitchens hot cocoa mix in a 10 ounce package without an antioxidant claim, which sold for \$2.99 or 29.9 cents per ounce. Id. He concludes that the “price difference is tantamount to an overcharge of approximately 11.8 percent,” id., and that the entire overcharge is the damages per unit sold, id. ¶ 18. As with Hunt’s, the generic

1 comparator product is not appropriate. See Ugone Decl. ¶¶ 37-38 (Swiss Miss is a market
2 leader that has spent decades building a brand synonymous with cocoa). As with Hunt's, the
3 entire price difference between Swiss Miss and the generic comparator cannot be attributable
4 to the label statement. See In re POM Wonderful, 2014 WL 1225184, at *5.

5 Capps again proposes calculating damages under the CLRA via a benefit-of-the-
6 bargain analysis, see Capps Decl. ¶¶ 14-18, or a regression analysis, see id. ¶¶ 19-24. But his
7 benefit-of-the-bargain analysis requires the use of a comparable product, and as already
8 discussed, Capps did not identify an adequate comparator. Defendant challenges Capps's
9 regression analysis on the same bases as it did as to the other product groups, see Ugone
10 Decl. ¶ 7 (incomplete description, etc.), and Plaintiffs try to correct some of the deficiencies
11 through a reply declaration, see generally Capps Reply Decl. (dkt. 209-3) ("I have
12 demonstrated using data obtained from the Defendant that several damages models can be
13 constructed in regard to the class defined in Plaintiffs' Motion for Class Certification.").
14 Defendant objects to the reply declaration, arguing that it introduces new evidence, fails to
15 meet evidentiary standards for proper expert testimony, and is not a proper reply. See
16 generally Obj. to Reply Decl. Plaintiffs oppose those objections. See Opp'n to Obj. (dkt.
17 216). The Court permits the declaration but recognizes its limitations.⁴¹ Even assuming
18 Capps had sufficiently demonstrated that his proposed regression model was viable, his
19 model requires purchase price information in order to allocate any award. See Hawk Decl. I
20 Ex. E (Capps Depo) at 89-90 (describing how allocation would work, requiring "some proof
21 of purchase"), 142 ("I don't know how a consumer would be compensated without proof").
22 And, as already discussed, it is highly unlikely that consumers will be able to provide such
23 information. This is highly problematic. See Red, 2012 WL 8019257, at *11.

24 Perhaps in light of these problems, Plaintiffs argue for the first time in their reply brief
25 that "[t]here are still other ways to prove class-wide damages." Reply to SM Mot. at 13.

27 ⁴¹ Again, Defendant's most persuasive objections to the reply declaration are that while it
28 purports to do a preliminary regression, it provides no measure of claimed class damages and does not
include the variable Capps previously identified as his "key finding"—a variable associated with the
presence or absence of the challenged label statements over time. Id. at 3.

1 They argue that the Swiss Miss products are “legally worthless” because they are illegal to
 2 sell or possess, and therefore result in damages equal to the entire purchase price. Id. This
 3 Order has already concluded that the unlawful product theory fails. Even if it did not,
 4 Plaintiffs face the same obstacle in class members not knowing their purchase prices.

5 Plaintiffs also argued for the first time in their reply brief that the Court could award
 6 nominal damages under California Civil Code section 3360, or statutory damages under the
 7 CLRA. Id. at 14.⁴² Neither of these would require a damages model or proof of individual
 8 consumers’ purchase prices. However, neither are appropriate.

9 Section 3360 allows for nominal damages “[w]hen a breach of duty has caused no
 10 appreciable detriment to the party affected.” Cal. Civ. Code § 3360. But Plaintiffs’ CLRA
 11 claim has nothing to do with a breach of duty, see SAC ¶¶ 298-316, and Plaintiffs do not
 12 identify one in their reply brief, see generally Reply to SM Mot. Nor do Plaintiffs point to
 13 any CLRA case permitting nominal damages, let alone a CLRA class action. See id.; cf.
 14 Stilson v. Reader’s Digest Ass’n, Inc., 28 Cal. App. 3d 270, 274 (1972) (“Although an award
 15 of but nominal damages to each of the millions of unnamed plaintiffs would impose a heavy
 16 penalty upon defendants, it would hardly serve the interest of any plaintiff.”).

17 The CLRA addresses damages, but only to say that any consumer who suffers damage
 18 may bring an action to recover, among other things, “Actual damages, but in no case shall the
 19 total award of damages in a class action be less than one thousand dollars (\$1,000).” Cal.
 20 Civ. Code § 1780(a)(1). That language sets the minimum for a total award of damages in a
 21 class action at \$1,000; it does not provide for an automatic award of \$1,000 per individual
 22 class member. Compare 17 U.S.C. § 504(c) (providing that copyright owner may elect
 23 award of statutory damages for all infringements of \$750 to \$30,000 per infringement). Thus
 24 in Wilens v. TD Waterhouse Grp., Inc., 120 Cal. App. 4th 746, 754 (2003), the California
 25 Court of Appeal explained, “This language does not create an automatic award of statutory
 26 damages upon proof of an unlawful act. Relief under the CLRA is specifically limited to

27
 28 ⁴² The Court allowed Defendant to file, after the motion hearing, a short brief responding to this
 argument. See Minutes (dkt. 226). Defendant did so. See Supp. Br. (dkt. 227).

those who suffer damage, making causation a necessary element of proof.” See also
Delarosa v. Boiron, Inc., 275 F.R.D. 582, 593 (C.D. Cal. 2011) (same).⁴³

Accordingly, the Court finds that Plaintiffs have not presented an adequate damages
model as to Swiss Miss.

2. Superiority

Finally, in addition to demonstrating the predominance of common issues, a plaintiff
seeking to certify a class under Rule 23(b)(3) must demonstrate “that a class action is
superior to other available methods for fairly and efficiently adjudicating the controversy.”
Pertinent to that determination is: (a) the class members’ interests in individually controlling
the prosecution or defense of separate actions; (b) the extent and nature of any litigation
concerning the controversy already begun by or against class members; (c) the desirability or
undesirability of concentrating the litigation of the claims in the particular forum; and (d) the
likely difficulties in managing a class action. Id. Assessing superiority “necessarily involves
a comparative evaluation of alternative mechanisms of dispute resolution.” See Hanlon, 150
F.3d at 1023.

a. Hunt’s

As to Hunt’s, Defendant does not specifically address superiority. Nonetheless, its
arguments about ascertainability also apply to manageability. See In re POM Wonderful
LLC, 2014 WL 1225184, at *6 n.8. Plaintiffs have not proposed an adequate means of
identifying each class member, which products each class member purchased, and how many
products each class member purchased. See Hodes, 2009 WL 2424214, at *4 (expressing
same concerns); Sethavanish, 2014 WL 580696, at *6 (same); see also Algarin Order at 23
(“Courts are reluctant to permit action[s] to proceed where there are formidable . . .
difficulties of distributing any ultimate recovery to the class members, because such actions
are not likely to benefit anyone but the lawyers who bring them.”) (internal quotation marks

⁴³ To the extent that Pickman v. Am. Exp. Co., No. 11-5326, 2012 WL 258842, at *2 (N.D. Cal.
Jan. 27, 2012) (calculating amount in controversy by multiplying “the minimum amount of damages to
be sought under the CLRA (\$1,000) by the number of alleged violations”), suggests a different analysis,
the Court would disagree with it.

omitted). Given these deficiencies, it is not at all clear that a class action as to Hunt's would be manageable, or superior to individual actions.⁴⁴

b. PAM

As to PAM, Plaintiff argues that “[g]iven the number and importance of the common questions described above, the adjudication of class claims would not be significantly more burdensome than if the matter were prosecuted individually.” PAM Mot. at 22. Defendant responds, though, that PAM labels differed during the class period among products and over time, that consumers will not be able to readily determine whether they are class members, that there is no way to test their recollections, and that there is no way to establish what class members paid for their PAM purchases. Opp’n to PAM Mot. at 24-25. Despite the undeniably common questions—chiefly, can Defendant label PAM as “all natural” if it contains unnatural propellants—the concerns Defendant raises are substantial and render the case unmanageable. Class treatment is not superior as to PAM.

c. Swiss Miss

As to Swiss Miss, Defendant does not specifically address superiority. Nonetheless, its arguments about ascertainability also apply to manageability. See In re POM Wonderful LLC, 2014 WL 1225184, at *6 n.8. As with Hunt's and PAM, it is not at all clear that a class action as to Swiss Miss would be manageable, or superior to individual actions.

IV. CONCLUSION

For the foregoing reasons, the Court DENIES all three motions.

IT IS SO ORDERED.

Dated: June 13, 2014

CHARLES R. BREYER
UNITED STATES DISTRICT JUDGE

⁴⁴ Of course, there are significant problems with individual actions as well. As in Hanlon, individual cases here “would not only burden the judiciary, but would prove uneconomic for potential plaintiffs.” 150 F.3d at 1023. It is hard to imagine many class members actually pursuing individual cases. “[A] class action has to be unwieldy indeed before it can be pronounced an inferior alternative—no matter how massive the fraud or other wrongdoing that will go unpunished if class treatment is denied—to no litigation at all.” Carnegie v. Household Int’l, Inc., 376 F.3d 656, 661 (7th Cir. 2004). This case is “unwieldy indeed.”
